The bowl is up to be down
That is the very sound
The Horizon sounds its bias bow
I mean what I say
Gold fish are never found down town.

From this quick review of my limericks the agency of “lime” is in the lime light. “limming” is the word for drawing- pertaining to limits i.e. definition. Similarly Information architecture of computer works are hyper extenuating of schematics. The limerick (a kind of program), the drawing, the computer program overlap. In Prosody of poetic meter the shortening or lengthening of phrase is a kind of “tether” like a tether ball, adjustable and compelling- the actual game of tether ball also involves in the quickening rhythm a version of entropy- the architect Pevsner made a game of marbles sliding down a chambered caseway which as they quicken pace become more difficult to control- rejoin a kind of primeval (prime +eval-> eval= time) chaos just as the underground river Tethys maps the race of the underground.

The horizon is where the top surface inverts on the wheel, my work is a niche space of these turns of phrase- trope, drawing symbolizing both language and itself or rather the tension between verbal visual space as conceptual to experience as created through a broader sense of language engaging topologies of sense to their morphic origin in created experience.

The lengthening and shortening motif is taken up in the I Ching program, i.e. the straight and broken lines as modality in which the combined aspects , allois of two terms reflects on the elasticity of logic- in our Western Rhetoric we have this principle engrained in the rhetorical definition pattern of ethos pathos and dialectic wherein the first two terms condition “discourse” which alters dialectic to different structures of person- Unity, Dialectic, syllogism, morpheme, syllepsis, and chance – conflux beyond flux. Another diagrammatic is that of morphological arrows, the logic of unity, opposition , intersection derived from cubism which give to set theory the neologistic sense of topology.

So for my June Morphological Arrows volume 3 for Rhizome I will organize the schematics of venn diagrams as plate like structures I can use towards the perspectives of an inverting language analysis through drawing as language, continuation of the I Ching topological game, limericks, indications of polyphonic morphology, as elements of computer space hyper extenuating of life and lim, and schematics, topologies, morphologies, Morphemes.

LIM DELIMITED UNLIMITED LIFE AND

More form is the morphing of the formative
Straight Edge Horizon is informative
I Spent some time talking to Two
While Three singing to four
That's How I mashed the morpheme

Tethys underground fresh to sea alite and ablaze
Specific as Pacific in the haze
Overground she plays tetherball circling
Straight edge horizon furled long

SYNECHDOCHE

Figure 8

Figure 8 shows two images. The left image is a colorful, abstract, and somewhat chaotic composition of various shapes and colors, including red, yellow, and purple. The right image is a black and white line drawing of a complex, abstract structure, possibly a network or a map, with many interconnected lines and nodes.

Figure 8

Figure 8 shows two images. The left image is a colorful, abstract, and somewhat chaotic composition of various shapes and colors, including red, yellow, and purple. The right image is a black and white line drawing of a complex, abstract structure, possibly a network or a map, with many interconnected lines and nodes.

The drawing represents the golden section grid that is my personal model as a subliminal model in my drawing and that my friend in an hour glass shape comes from two such grids creating that shape only or subliminally... I have built in relation to this overlapping loop mapping, one of which explodes the others content and placed these events together as the allegory of communication with the paradox depicted.

Scrap paper 8

Drawing as limming roughly qualitative parameters assimilating configuration and in computer space the hyper extension of schematics as an allegory of the rhetorics by which ethos pathos and dialectic relate paradigm shift to discourse.... The dilemma of the limming for me is the lemma of globe form mapping I like to relate to the computer art between the movement of a labyrinthan enfolding and monumental zone to the topesthesis in situ= exsitu...

This drawing recognizes the golden section grid that is my personal modular as a subliminal mood in my drawing and that my interest in an hour glass shape comes from two such grids creating that shape subtly or subliminally... I have built in relation to this overlapping loop mapping's one of which explodes the others content and placed these events together as the allegory of contextualization itself the paradigm displaced.

Soto De Soto

Jesus De Soto was an early Modernists whose "kinetic" sculptures look a lot like models for computer art- for him the kinetix were not about moving parts, but rather forcing the viewer into moving... I am interested in how this might relate to cyber art...

Golden section grid subliminal hour glass (lim-limit- "draw")

Ramping the Phenomenology of Ribbon Window Consciousness

Hegel appeals to naturalness, echoes of the Pre-socratic's form whom Heraclitus ("a thing agrees by being at variance with itself") is major influence- and dismisses the directions of agency be it primary as an assertion of transparency or secondary devolvement to situating a configuration through mood and mode which he terms like catching a bird with lime... this clever allusion to the sublime, and its corollaries the subliminal and limmable brings us closer to a realization of how our familiarity with relating consciousness to the subconscious contrasts with his awkward title Phenomenology of Mind. Rather than consciousness being a primary agency upon which we have as a codicil created the subconscious as a dimension the fact is that "consciousness " is a concept that has evolved with great effort probably over a stronger primary identification to the subconscious as originary in what was termed the "sublime". Stan Douglas the video artist comments: "In Nu*Tka* (a video work) the whole issue of the sublime comes up. And with the extremity of the liminal space to which it is a reaction, we also come back to the notion of the law. Are you able to assume a position transcending the natural world, or are you subject to its influence , as a part of it? The Romantics admit the latter, in as much as the terrified awe they sometimes present comes from the apprehension of the natural world's absolute indifference to human will or presence. The little figures we see from behind in David Caspar Friedreich's paintings are witnesses of sublime events but also underline the the fact the pictures represent something unrepresentable".

His term of "underlining" morphs to the relation of "limming" to drawing, of limits as modality- trace...however his affiliation to representing of events is a step ahead of the more primary "presenting" by which Hegel approaches phenomenal reading and accordingly for me Friedreich's sublime is actually in general an architectural vision which is out of place in the picture and present the pictures sigla, It's concept of itself, it's self reading. For Heidegger perhaps Dasein or there being or for me the somehow question that is the statement we come upon. Smithson who related the kind of cosmic indifference Douglas mentions related on his part to the collective subconscious and was tapping into what Lacan terms the creation of the subject. I believe this term of Lacan gives the best account of Hegel. The restoring process here is to cease perceiving the PreSocratics as "natural philosophers" at a root and recognize that Deleuze existed to overcome the whole idea of "transcending" and instead return to morphology as that which is not meta morphosis exactly but rather behind the scenes.

The sense of "aural" as a word – morpheme that shape both aural as sound and aura per aurora or visualization- the sense of this radiance, shows up in art- Orphism, Targets per Johns, Duchamp's Anemic Cinema, Arthur Dove, and also Wright's Guggenheim. For Heraclitus, relating the bow and the lyre syllogistically to what we appreciate as Dionysian and Apollonian consciousness he indeed is looking into phenomenology upon its own event- that sight reads sound and sound reads sight.

For me art is often an interpolation and interpellation of ft events , and in considering information architecture -architecture itself is a programmatic that give an interesting contrast between the Architects book- now magazine, which transports culture mushroom style, sporadically, by vectors of interest afforded the portability of the program. In the architect Sieza for example there is the combination of Greek vectoring of plan in relation to his interest in very specific local styles, and Ando also has that interest in local traditions that reflect on the idea of a broader autonomy.

In my Madison Wi environment the Wright Prairie house style has interesting local deterritorializations in the form of a kind of modernism massively interpreted towards the ribbon window on the one hand, and a use of the ranchhouse idea of integrating a slope into construction. The drawing series I am working on tends to take that general topology as a topos that interests my line of approach....

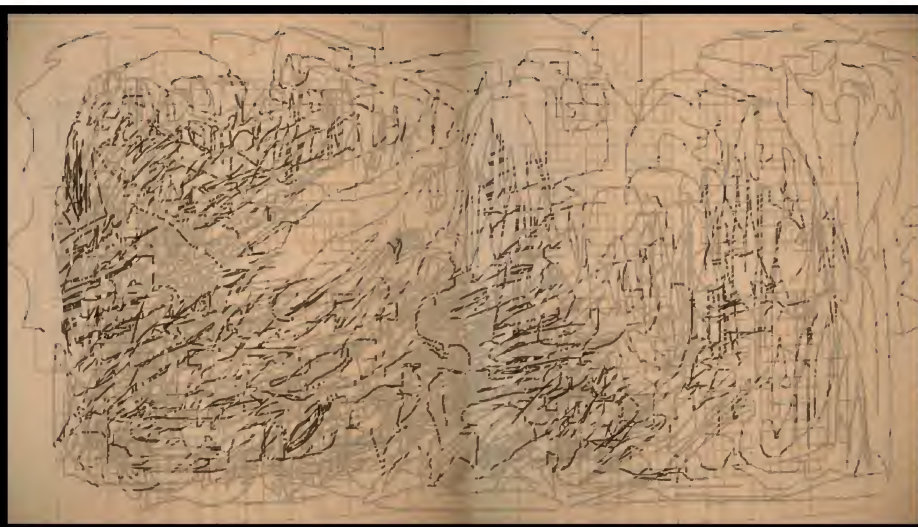

The Hour glass series which is based on the form of two golden section grids I devised uses the divisions of the paper as a scale through which I approach the dimension of the form. The diminutions in module you see are the basic progression of the spiral mapped onto a square into which these can analyze any interior position... in the drawing sheet I am not making a mathematic drawing per se, rather the line approaching the limits, just as drawing is called "limming". One of Gorky's best titles was "The Limit". my use of the ziggerat/hour glass suggests the way the sand of an hour glass also approaches the limit, one is always reading, gauging the glass, in an approximation, just as the golden section is an irrational number and the drawing line is in true flux.

DOUBLE HERMENEUTIC

The original intent of the cubist mask series of drawings which were interpolation of drawing encountering photography and interpellation of software vectoring towards a kind of reverse photo engraving are altered here. At the same time the theme included a bicycle light which responds to the photo flash of the computer itself and thus “reflective agency”... In the present series- Instead the idea of masks, successive layers of drawing overlay pun the idea of mask.

[illegible]

Sketch paper 8
Disrupting a flattening roughly qualitative parameters installing configuration and in computer space the hyper extension of schematics in an allegory of the rhetorics by which ethics pushes and dialectic relate paradigm shift to discourse. . . . The dilemma of the flattening for me is the lemma of globe form mapping I like to relate to the computer art between the movement of a labyrinth enfolding and monumental zone to the topes thesis in drawing evolves.

This sketch recognizes the golden section grid that is my personal module as a subliminal mood in my drawing and that my interest in an hour glass shape comes from two such grids creating that shape subtly or subliminally. . . . I have built in relation to this overlapping loop mappings one of which explodes the others content and placed these events together as the allegory of contextualization itself the paradigm displaced.

Alloisis: breaking an argument down into it's alternative in this case is represented through the drawings adoption of cyber space alternatives to :surface.. The appearance to a zenith of the loop is variously arrived at, the varieties include projecting a surface like a a virtual solit that invites the drawing, and again a sense of transpose into a kind of niche, or then again a rotation from the cyber sleeve forward into the viewers space... The ethos is the traditional mapping of mark between surface and visual depth and Mannerist interest in exhibiting the discoveries of a modeling and carving sensibility taken to drawing.
: The expressive intent has to do with the interlocking of these motions in their variety and the discourse is centered on the interest in relating the material traces of mark making to a virtual realm.

Amplification:Elaborating a scheme, heighten effect . The drawing uses amplification by relating a complex pattern block as a background to its working elements which as a series projected to the foreground give a sense of winding and threading through computer space... the motion moves between a kind of square and round column association as a topos that projects drawing form dialectically between architectural and organic landscape like sensibilities and the associations of a human transport within these means towards cultural assimilation of a self made environment.

Anacoluthon: mixing syntax... in this drawing a kind of cave drawing syntax and computer space that seems to using marks in a kind of particle accelerator have become a spatial mix...both caveman and scientist are trackers... The ethos of relating to an “in camera” environment does not relinquish the pathos of relating to what is at hand but pursues expressive content through the sense of turning the environment demands, even as a thought experiment

Anacoluthon: mixing syntax... in this drawing a kind of cave drawing syntax and computer space that seems to using marks in a kind of particle accelerator are some a spatial mix...both caveman and scientist are trackers... The ethos of relating to an “in camera” environment does not relinquish the pathos of relating to what is at hand but pursues expressive content through the sense of turning the environment demands, even as a thought experiment

Aposiopesis : abruptly breaking off a sentence, allowing audience to finish.. In the example her I have visualized this by leaving the written text at an interrupted x hight... the words are finished in the visualization of the drawing itself.

The Pathos of completion and the ethos of a visual-verbal space find expressive content in an element of surprise and dislocation.

Apakoinu Construction: punning use of a word in defining a pair of contexts, in this drawing I have turned the amplitude of a drawing series into a kind of ampitheatre. The ethos of drawing as existing between color and monochrome expressively bends space in a dialogue of broadening ones outlook.

Chiasmus: ABBA structure, in this visual structure I have used the diagonal as a symbol of space. The elements of structural embedding, and structural enfolding are posed at a diagonal relation which gives a sense of expressive transport to that pathos of structural emphasis in the dialogue between a compression and expansion that occurs to the drawing eye and hand in its relation to motion in mind and world through the focus and scan of the drawing attack.

Delivery : In verbal rhetoric includes tone , posture, body language...

The expressive intent or pathos of delivery as represented through my interest in what might be called the natural theatre dimensions artist's such as Guercino brought to Mannerism.

Correspondingly I draw as though using a chisel not entirely in emulation of Michelangelo but because I spent a lot of my childhood playing with the chisel in a very intense kind of abstract play. Drawing as though carving comes naturally to me, and the remove of cyber space brings out new and interesting discourse to motion in space as drawing.

In the drawing below I have interrupted the normal intent of drawing software and discovered very strange affinities for the physical world.

8-The River God there borrowed from Michelangelo and leveraged, becomes the Guanyin meditation “Position of Royal Ease position” .

Super Pattern 1

Polyphonic : Multiple voices, The drawing pairs the Chinese ideogram for heart with a drawing that creates a version of circulation in an architectural voice of organic form. The shift of mood is an expressive element, the context is combining a kind of niche space with its own broader flow and the general sense of usage in drawing is that of poiesis, the structural inclination of poetic mood and mode. The drawing includes the Chinese word Xin which is for heart, and the rhetorical term syllepsis which means a punning definition such as the general idea of circulation is reaching for in this work.

COLONIS - ET IV

Verba: the sense of movement in the argument... I am referencing through the drawing what are called in logic “morphological arrows,” information retained through changing contexts. The Ethos of the example here is rooted in relating print like denominations of the drawing in the dialogue in which they traditionally have reflected on each other... the pathos being the impulse to find in drawing a constant branching out of its own dimension.

...the information retained across change is essentially topological in nature. If we call consciousness the virtual verbal space, perception of the present, while it takes transparent and opaque structures as the palimpsest of trope, loss and virtuality, as along the three axes of virtuality between program and variation, artistic proof, numerical, material, mental, is a trope.

Opening: In rhetoric the opening, as strong preamble is punned in my use of architectural joinery forms which are openings in which the forms symbolize drawing itself, its own joint structure.. The pathos form felt as though in hand in the ethos of structural links looks into the sense of rhythm that becomes the mediums translation of matter through a motion sensor of software that indicates haptic connection as its' own metamorphosis

Noema, a state of calculated obscureness, has presence as a rhetorical device within the works here through the process in which a masking process has been exaggerated to include hundreds of states. The blocks of imagery one sees on the sides become as a composite the central image which in and of itself shows little trace of so much commotion. The sense of pathos that accrues to such a manifold finds expressive relief in what appears the simplification.

Scesis Onomaton, using words with a certain relative topography to relate idea through a kind of listing... is an idea rather loosely used in the idea- drawing below which involves a series of word suggestive of experience generating experience using a format derived from the Iching characterization of natural forces.

The ethos of the idea resides in the association with the idea of associative trope given a momentum. The expressive content looks into the double take of visual verbal space.

Parachesis : repetition of sound in successive words: In the drawing I have compressed drawing elements to linear forms, like the mouth narrowing to a single position to form sound. The context is that of a linking motion across these linear element that jumps across field to join the broadening loop of space.

The sense of expression is through relating physical compression of drawing through ones muscles to this cyber activity in which the validity of drawing itself as being motion is it's own ethos. The dialogue of different shapes that one may ascribe to the idea of rectangle is broadened by it's interior imagery as shared across different shapes of a rectangle format.

6-DORJEE- THE SIGNIFIER OF THUNDERBOLT : THIS INSIGNIA WHICH INDICATES A THREADING TO POINT IS SIGNIFIER REALLY OF THE WHEEL, THE POINT AT WHICH TOP SURFACE BECOMES TURNED TO VIEW, THE CURVED PERSPECTIVE BELONGING TO CRATER AND KRATER.

Figure— unusual arrangement derives from verbal to visual rhetoric in this case in the context of adapting the idea of a scrolling motion linked to seal printing but at a media metamorphosis in which a sense of momentum dominates the expression and the dialectic between modeling and carving as trace elements of traditional materials within cyber drawing ■

It would be interesting to study families that are multi lingual. The languages in that instance are absorbed as a unity. If one learns a language that is a unity. However Pidgins (such as French, which is a pidgin or creole of Latin) are examining a second language to another in order to learn to when I lean Cambodian some their sounds are more like J and some more U, I have to get my bearings. Similarly, the term "double hermeneutic" (hermeneutic means examining texts) refers to a distinction between the hard sciences and sciences in that the study of chemicals for example does not alter the chemicals or the objects studied if one can put the Haysman aside for a moment. Social studies on the other hand do alter that which is studied. The value of rhetorics, likewise, is to identify through the different levels of approach and usage how language is gauged. The term, implies this, Lang = tongue and gauge relates to a pledge or direction, an intent. In this way a multidisciplinary context is established.

irical term, essentially a syllogism...

The drawings below show a morphological version of this idea, the morphology of the dry point that wet paper is pulled into the grooves of a plate with cut lines which receive and release the paper and since ink has been rubbed in the grooves these inverted forms extrovert. In the cyber realm I have related this through the capacity of the hardware to create marks behind and in front of each other. The rhetoric thus is that of "transparency"

Horismus : defining by negation one encounter in art examples such Durer or Morandi graphic works where the unmarked areas spring into relief... in my drawing below I have taken a different approach in which the elements of a series are used as masks that drop out sections and build simultaneously.

The context of negative definition has been shifted in the example to a productive sense of anabolic and catabolic contrast as the ethos in which expression has to do with encountering the unexpected coherence of the process...

The context of negative definition has been shifted in the example to a productive sense of anabolic and catabolic contrast as the ethos in which expression has to do with encountering the unexpected coherence of the process...

Enallage: expressive change of mode: In the stella like picture writing of the this gray field one can see a shift from the archive like forms of the color field to a schematic that has a Sumerian like quality which is interesting as a trope towards the computer "tablet." The ethos mentioned here of marking through altering a sense of scale via relief field gives a different and expressive mood to mode.

Ellipse : the suppression of information for expressive purpose is here the qualitative parameter or ethos out of which the imagery relates computer sleeve dimension to traces of drawing on a surface in which areas are unmarked.

The Pathos of space linked outside computer genesis and within its comport combines spatial delimitation of overlap and edited image sharing a sense of punning “in camera” as a dialectic.

Drawing Visual Verbal Space 1

Delivery : In verbal rhetoric includes tone , posture, body language...

The expressive intent or pathos of delivery as represented through my interest in what might be called the natural theatre dimensions artist's such as Guercino brought to Mannerism.

Correspondingly I draw as though using a chisel not entirely in emulation of Michelangelo but because I spent a lot of my childhood playing with the chisel in a very intense kind of abstract play. Drawing as though carving comes naturally to me, and the remove of cyber space brings out new and interesting discourse to motion in space as drawing.

In the drawing below I have interrupted the normal intent of drawing software and discovered very strange affinities for the physical world.

ED ACMENT

inflammation of the tissues the impulses direct towards the neurons stacked behind the blood structurally. Similarly, with diabetes I think the insulin markers which mimic to some degree the inflammation response but are nested in the cell walls become diverted by lipid structures in the case of obesity... In media terms then the allegory is towards morphological arrows, information maintained as structures change, but drawing emphasises the dialectical direction of rhetoric to maintain motion in mind and body rather than the allegory of numbers or stills by which there has been the subconscious cultural identification to meaning as indexical, motivated by the photograph and its ganged stills to produce cinematic motion, all of which was predicted by Zeno's paradox of the arrow in flight which at any moment must occupy space there fore be static...this paradox being due to the assumption of a point of view, borrowed from the idea of perspective and the added adjective of "scientific" ... but this is an intellectual precept that is counter intuitive to what motion is and needs critique to restore to configuration and representation the meaning of movement. Therefore a point of view may well be an insufferable concept, rather, there is a turn, a trope, a turning into and inflexion , 'throwness" at the transformative plane of consciousness in which the morphological arrow rather than indices of associations within a continuum are exploded states of metamorphosis in which such topographies of temporality express a morphic topology.

movement and morphology, the following drawings continue the theme of representation, founded on the configuration of drawing movement in virtual space, which founded on materials now works towards those associations as allegories newly transformed by the double meaning of trope as meaning both program and variation.

corollary of philosophical "pointing" which does not require the positing of meaning which the nominalist critique implicates'. Thus the nominalist critique is no longer a part of the necessity art ontology can build from visual rhetoric.

In the following works I relate to the idea of morphological arrows, in relation to what the minimalists posited as "no-space", that is, the removal of spatial cues outside a sculptural object: arrows in no-space are then a theme here as demarcations of the above discussions.

Semiotic Niche: in biology means use of resources; in this case a potential metaphor for the substantive art ontology that can be founded out mood and mode of visual rhetoric (meaning varying points of view embedded within embodied form). This in turn suggests conceptual and perceptual necessity to self limit by self mapping by occasioning the viewers review, i.e. re-launching the act of vision as streaming its field of inquiry. A familiar example is the torus, ie as Mannerist drawing uses the modelling contour line to create cross sections of the form within the flux of drawing itself. The notes embedded in the drawing above are to this effect, searching out a substantive, and in which the notes are not a continuum placed in a self consistent visual matrix of philosophical reflections but are altogether an irruptive use of color as drawing which breaks out the plane of consciousness along
